

While the world and healthcare have changed in many ways over the last two years, Newton Medical Center stands incredibly proud and well prepared to continue to provide exceptional, compassionate care to our community.

Demand for Newton's services has increased dramatically in several key areas. To address our current needs, Newton Medical Center is reimagining the future by focusing on our surroundings and services to better support our patients and their loved ones throughout their health care journey.

To that end, the NMC Foundation has launched the "Your Care, Our Future" campaign to support three key facility projects designed to enhance the patient experience through clinical advancements; provide greater safety and comfort; and create a more soothing and healing environment.

1. New Behavioral Health Patient Unit in the Emergency Department
2. A newly designed and enhanced Intensive Care Unit (ICU)
3. Maternity Department Transformation project

### New Behavioral Health Patient Unit

The New Behavioral Health Project will be a dedicated, locked unit in the Emergency Department. The rooms will be designed to address the comfort and safety of behavioral health patients including accommodating stays for extended periods of time. Sensitivity to patient needs and respect for patient dignity have been our goals throughout project planning. Significant attention is being paid to the environmental safety of the rooms.

The new unit will include:

- 4 new treatment rooms, which will bring total bed capacity to 6.
- Built-in televisions, also designed with safety features, to provide a more comfortable environment for patients and provide a means for therapeutic programming.
- A new nursing station designed for team member safety with remote monitoring.
- A designated, comfortable working space for patient safety sitters.
- A newly designed family lounge and consultation room for privacy and comfort.

The new space will be much larger, significantly more private. Patients and family members will have the secure space they need along with compassionate, supportive care, that will enhance their treatment and recovery.

### Intensive Care Unit Redesign

Our community has come to expect high-level care, so enhancing and expanding the Intensive Care Unit (ICU) is essential.

The newly designed ICU will consist of:

- 10 private patient rooms, each with negative-pressure capability to allow for the isolation and treatment of patients with infectious conditions.
- Each of the new rooms will have ample space for advanced monitoring instruments and bedside visits from family and loved ones.
- The nursing station will be completely reconfigured to create a more centrally located space to enable rapid response and coordinated care.
- The family lounge will feature upgraded finishes and furniture, creating a more personalized atmosphere.

### Maternity Department Transformation

Quality of care comes first, but the patient experience and state of the art hospital facilities play a much more important role in the decision of where to give birth than almost any other kind of medical procedure.

The unit will feature:

- 17 private rooms, each with a spa-like atmosphere and leading-edge equipment.
- Special amenities for the new mom, baby, partner and family, including a quiet work space, a comfortable, sleeping couch, lounge chair and cabinetry for personal belongings.
- A dedicated hand washing area and new artwork in each patient room.

## Recognizing Your Generous Gift with a Naming Opportunity

Newton Medical Center offers many rooms and areas that can be named for a family, organization or individual. It is a special way to honor or memorialize a loved one or to promote a business.

### EMERGENCY DEPARTMENT

Private ED Patient Rooms (3 Available)	\$10,000
Fast Track Arrival Bay	\$7,500
Clinical Charting Area – Main ED	\$5,000
ED Security Station	\$5,000
